

Word count analysis

- mmq: takes words as strings of characters between word boundaries (`\b\s|^|`)
- omt: counts escaped tags and considers the apostrophe as a word boundary
- rnb: ignores escaped tags and considers the apostrophe as part of the word.

Example:

```
wall's<br />
```

- omt: three words
- rnb: one word
- mmq: two words

memoQ	OmegaT	Rainbow
2 words	3 words	1 word
wall's 	wall's 	wall's

Other characters might differently estimated too. The example above does not mean to be comprehensive.
